AMENDMENTS TO THE ABSTRACT:

Please replace the paragraph (Abstract) beginning at page 25, line 1 with the following rewritten version:

ABSTRACT

If high pressure gas is leaked out of back pressure space (high pressure space) (S3) which brings A scroll compressor has a moving scroll (22) and a stationary scroll (21) into press in contact with each other, the scrolls (21, 22) do not enter a sealed state and the compression does not occur. Based on this fact, a A seal ring (18) for defining the a back pressure space (S3) at the a rear side of the moving scroll (22) is provided and its position is adjusted between a sealing position and a leakage position with respect to an end plate (25) of the moving scroll (22).
